

TIBB

- a new tool
for taking an inventory
of accessibility

“It should be
easy to get in
and out of your
home and to live
in the
surrounding
neighbourhood.”

Facts about TIBB

TIBB prints out an empty, well-structured inspection -protocol from the application. After doing the inventory, all inventory details are saved in the program. It is then easy to create reports on the stock of available homes.

TIBB can be used on computers that have Windows 7, Windows Vista and Windows XP Service Pack 3. Only 32-bit versions are supported.

TIBB is installed either on a free-standing computer or integrated into your existing property database and can then be used on an optional number of computers.

For more information about cost, installation and integration please **TIBB** support email, tibb@hi.se.
